SECONDLOOK · UI DEMO · MOCKUPS v0

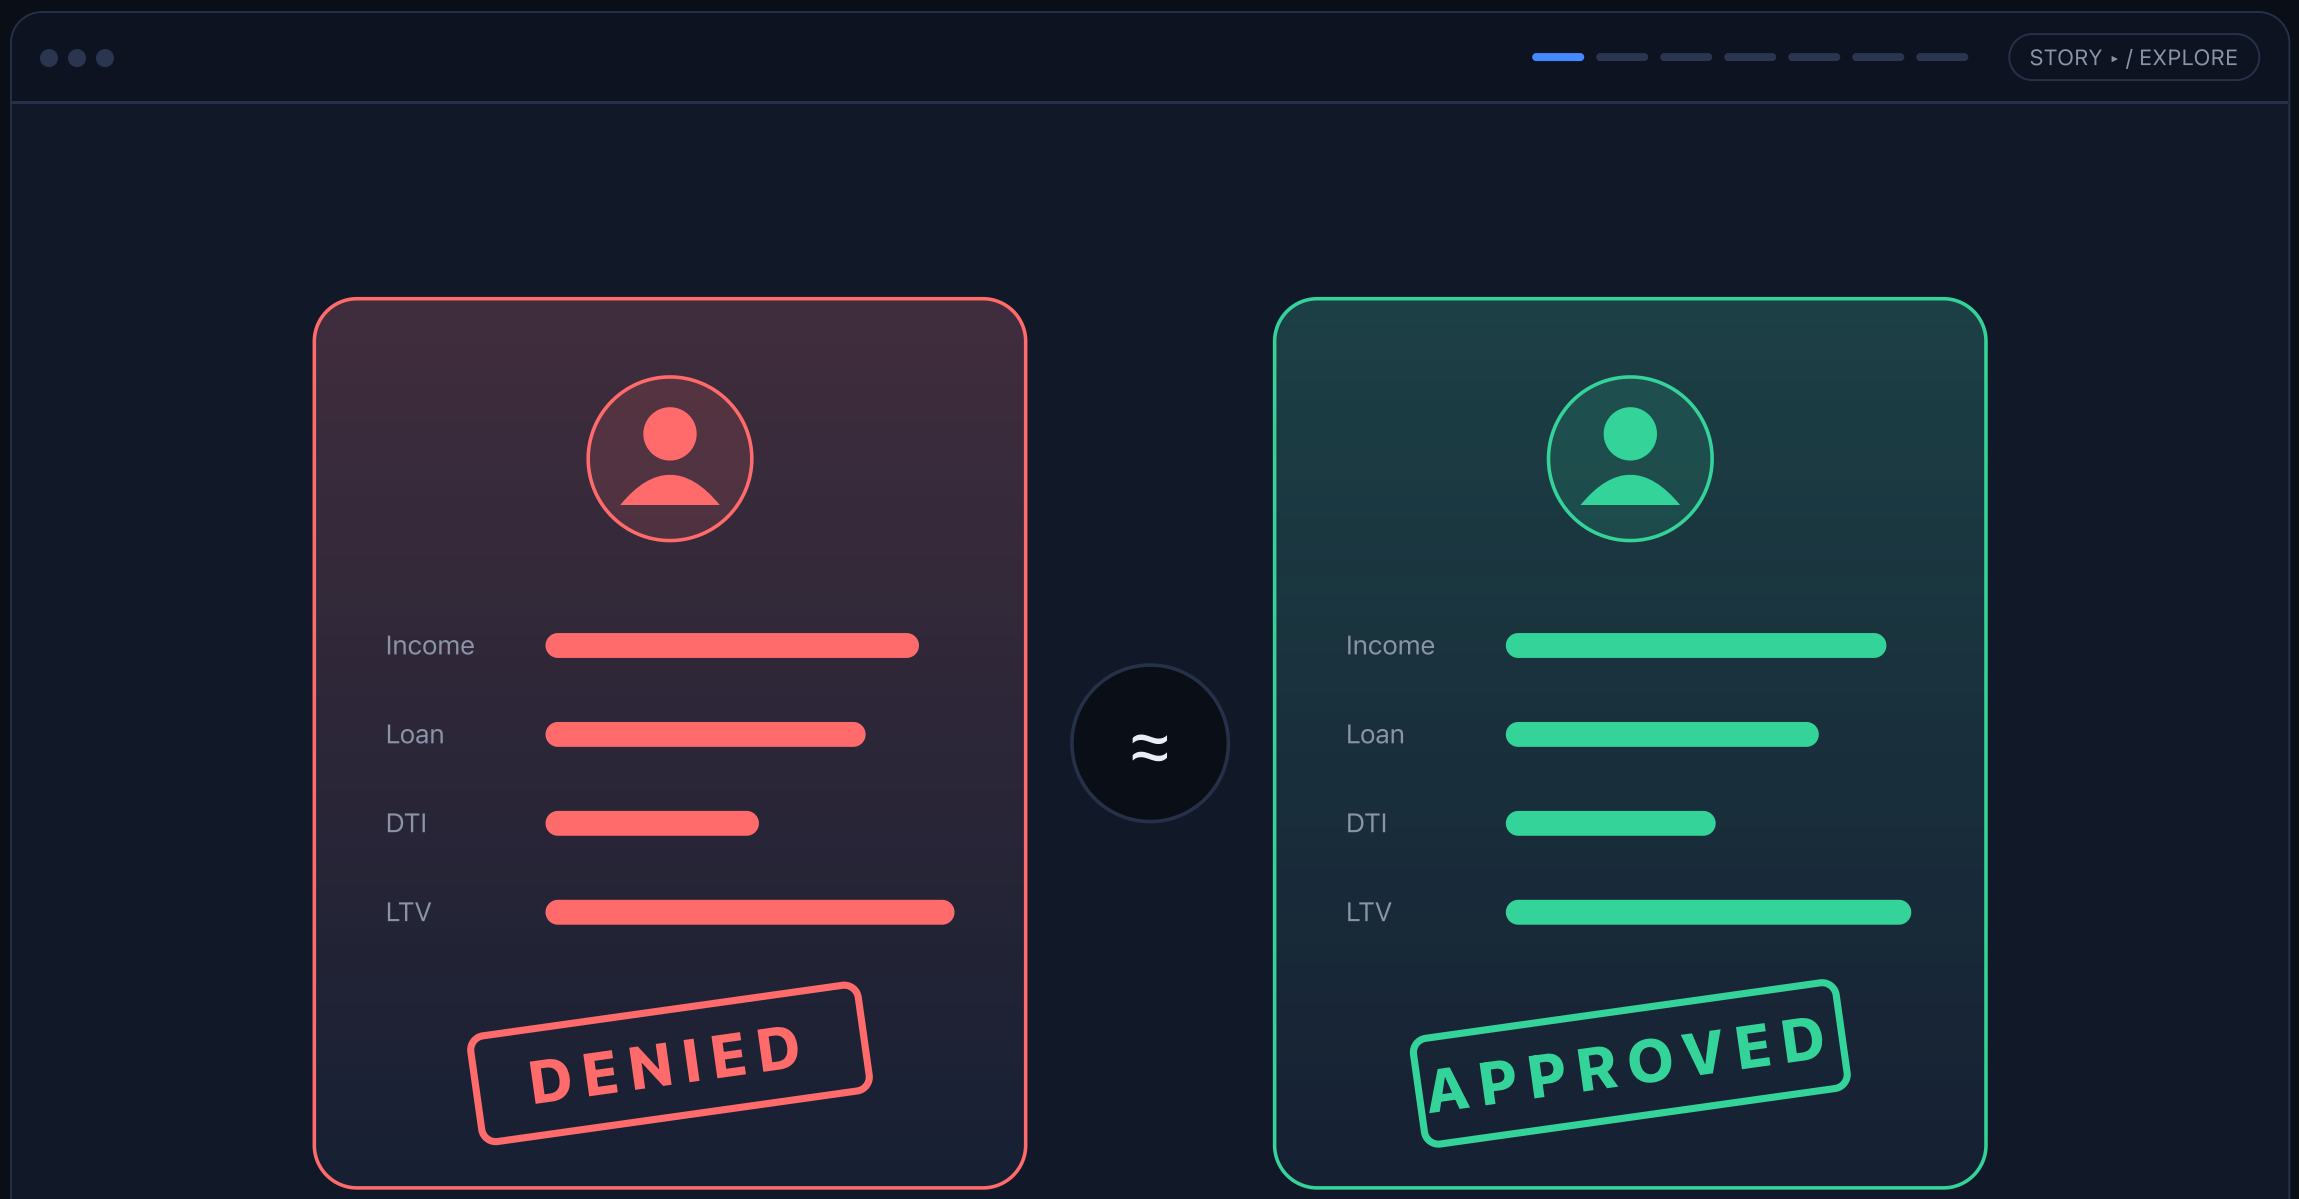

Same qualifications. Different decisions.

7 screens following the 3-minute script. Every number comes from docs/model_evaluation.md. Values on the case screen are placeholders until we wire it to the API.

denied · approved twin · SecondLook / IBM · caution / not assessable

01 · HOOK

Two applicants. Same profile. Different decisions.

Who checks why?

ON LOAD 0:00
Cards slide in from both sides. The bars grow and stay level with each other.

THEN 0:08
The two stamps land one after the other, with a small shake.

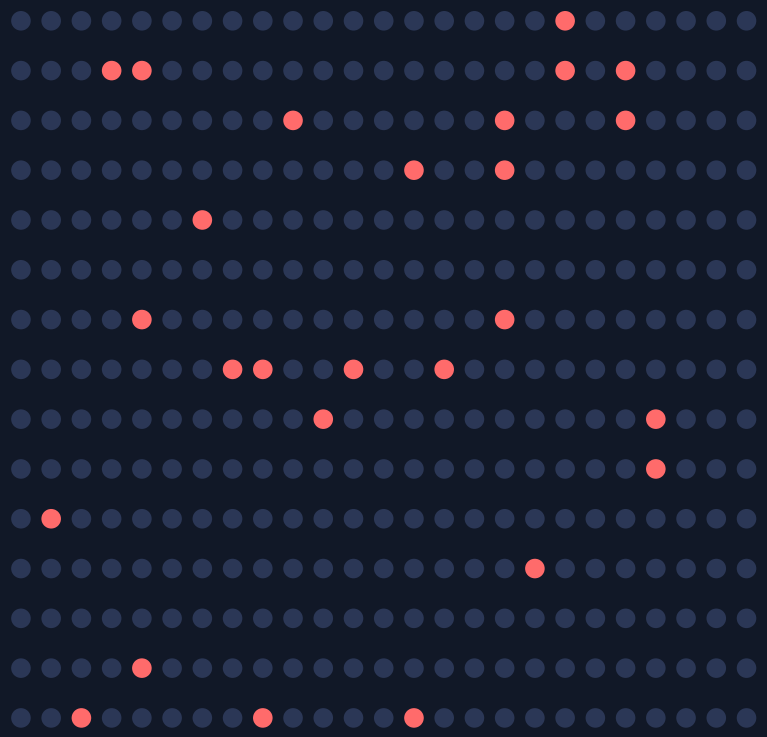

PRESS → 0:15
“Who checks why?” fades in, then the next screen.

02 · DATA & SCALE

From 37,491 applications to a review queue

STORY ▸ / EXPLORE

37,491

2,600

denied

has twins

874 not enough evidence

Maryland HMDA 2025 · 447 lenders

ON ENTER 0:20

The counter runs up to 37,491 as the dot field fills in (1 dot ≈ 100 apps).

THEN 0:28

The red dots fly into the “2,600 denied” bubble.

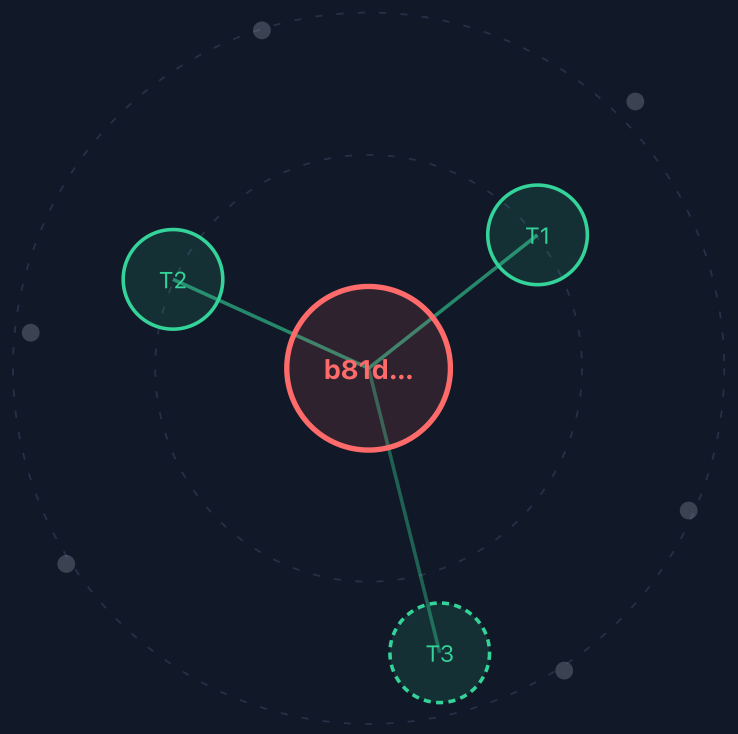

THEN 0:34

The donut splits in two. The amber slice is the cases we do not force into the queue.

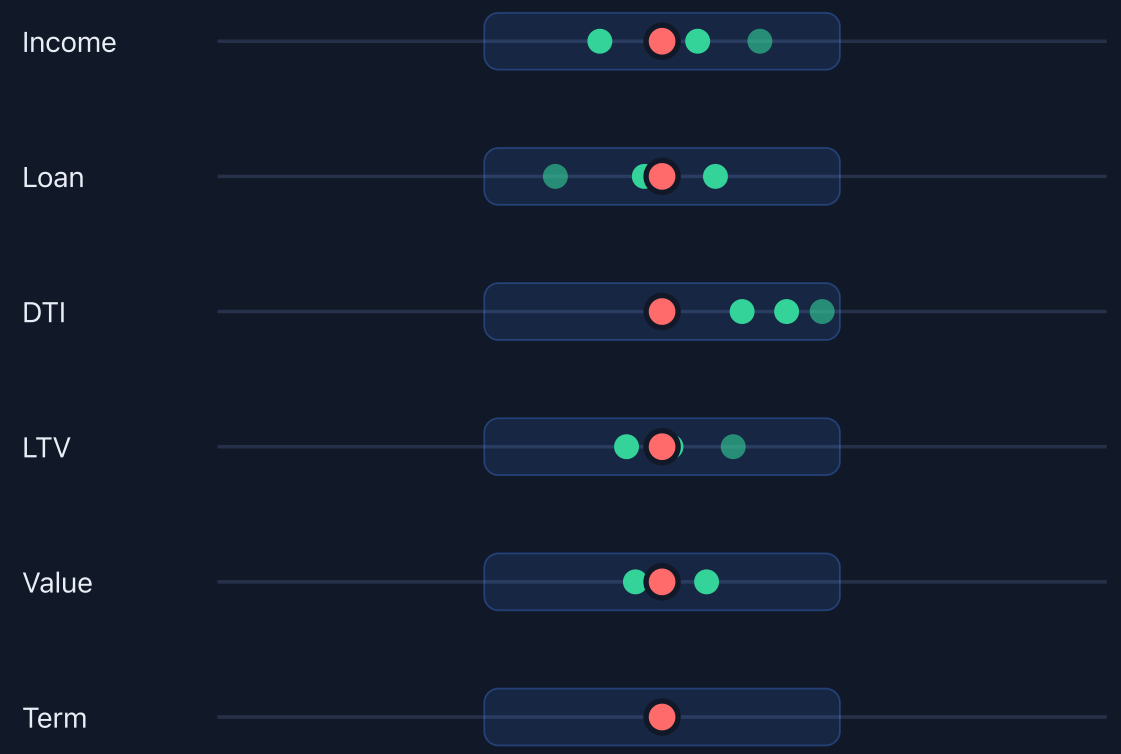

03 · FINANCIAL TWINS

One denied case, three approved twins from the same lender

STORY ▸ / EXPLORE

WITHIN TOLERANCE?

STRONG match same lender ✓

tolerance band denied twins — not reported

ON ENTER 0:40

The denied case sits in the middle. Grey approved apps drift past and three green twins lock into orbit.

HOVER A TWIN 0:50

Its dots light up on the strips. Any dot outside the blue band shows red.

EXPLORE MODE 0:58

A case picker (search box + top-25 list) replaces the hard-coded case.

04 · EXPLAIN · ASK · ACT

Reason check, Granite note, grounded Q&A, audit trail

STORY ▸ / EXPLORE

STATED REASONS vs DATA

✓ **Debt-to-income**
twins have similar DTI

? **Credit history**
not in public data

GRANITE ✓ validated

"3 approved applications from the same lender closely match this one. Stated reason: DTI. Review recommended."

facts only · no $ · no demographics

ASK

What could explain the denial?

How strong are the matches?

What data is missing?

DTI
LTV
Income

Largest gap: DTI, still inside tolerance.

built from structured results, no free-form text

DECIDE (ADVISORY)

○ No conclusion

▲ Escalate

AUDIT TRAIL

- Escalated · reviewer-1
  v0.1 · strong · just now
- Asked: explain denial
- Granite note opened
- Case queued

🔒 Cannot approve or overturn anything

ON ENTER 1:05
The reason cards flip over to show ✓ or ?. The Granite note types itself out (cached, so it is instant).

CLICK A QUESTION 1:20
The answer pops up as a mini bar chart with one line of text, not a paragraph.

CLICK ESCALATE 1:35
A new dot drops onto the audit timeline (real POST /review-decision).

05 · BLIND → REVEAL

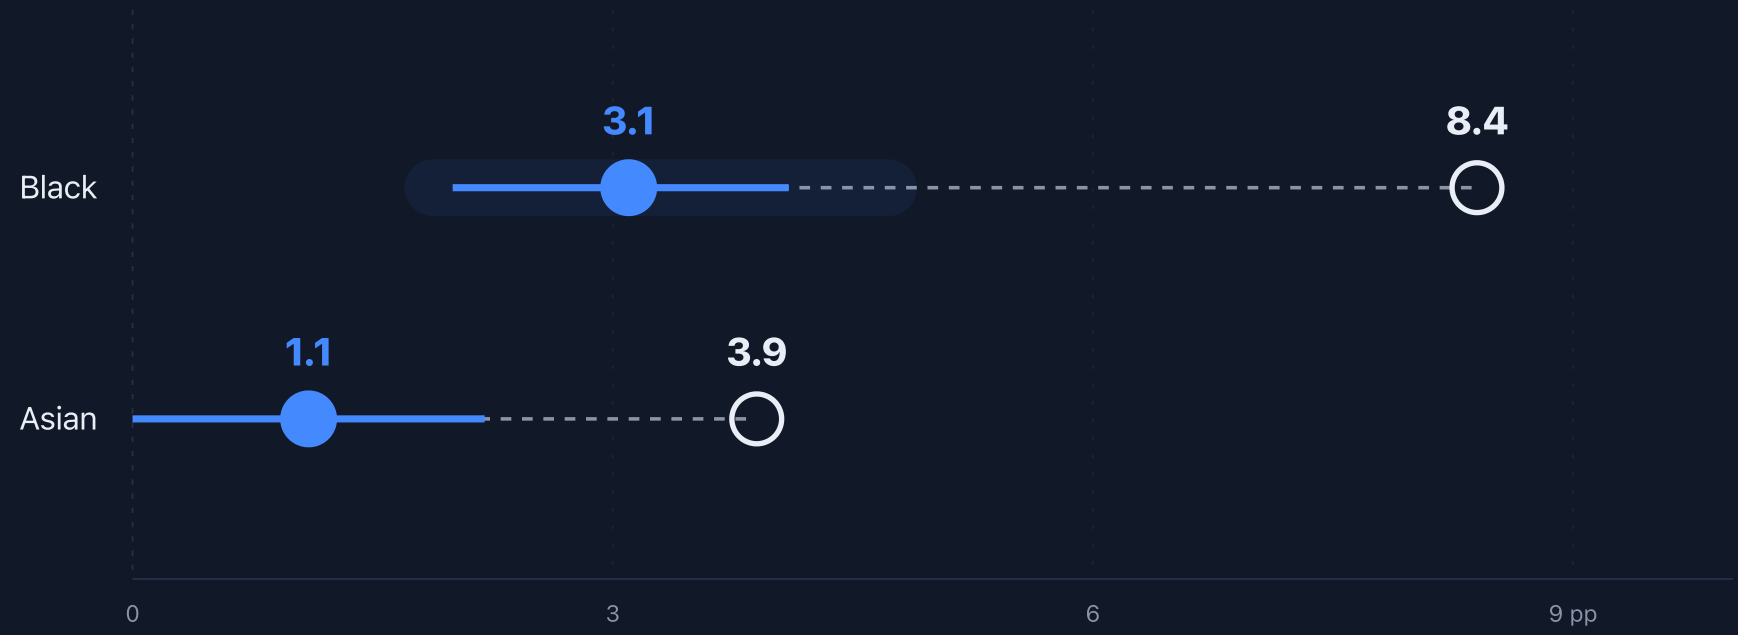

Match on finances first, then look at who was affected

STORY ▸ / EXPLORE

Blind | Reveal

token-gated · matched sets unchanged

raw
matched (95% CI)
range over 6 settings

denial-rate gap vs White applicants

An observed disparity. Not proof of discrimination.

ON ENTER 1:45

Blind mode: the chart is blurred under a blindfold icon. Only the matched pair counts are visible.

FLIP TOGGLE 1:52

The raw dots appear at 8.4 and 3.9, then each slides left to its matched value. The CI bar and sensitivity band fade in.

HOLD 2:05

The amber caveat pill pulses once.

06 · IBM LINUXONE

The whole sensitive workflow runs on one controlled platform

STORY ▸ / EXPLORE

LinuxONE · s390x

HMDA
SHED · ACS

Twin matching

Blind audit

XGBoost

Granite 4.0

Reviewer
SSH tunnel only

~4 ms
live twin search

≡ identical
result digests
s390x = arm64

```
$ uname -m
s390x

$ systemctl is-active
active active

$ curl /health
{"status":"ok"}

$ POST /analyse
3 twins · 3.4 ms
```

live from the VM when connected

Not faster than a laptop. The point is control: one platform, data never leaves it.

ON ENTER 2:10
Packets flow along the pipeline and the LinuxONE box glows.

CLICK "RUN LIVE" 2:20
Calls /health and /analyse-application. The gauge and the terminal fill with real numbers (or a cached replay when offline).

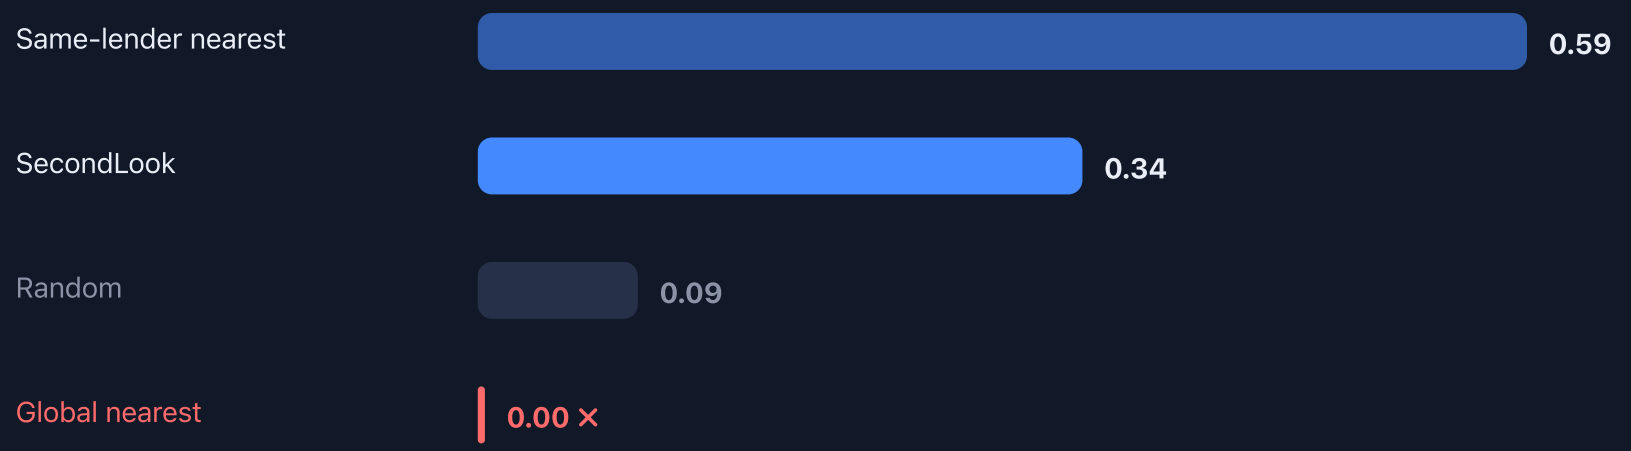

THEN 2:35
The throughput line draws itself and peaks at 460 req/s with 8 clients.

07 · VALIDATE & CLOSE

An honest test: the lender constraint matters

STORY ▸ / EXPLORE

FINDS INJECTED CASES · PRECISION @200 · SYNTHETIC

Same lender is essential

We add evidence + workflow

No accuracy win claimed

SecondLook doesn't decide who deserves a mortgage.

It makes sure questionable decisions don't go unnoticed.

ON ENTER 2:45

The bars race in. "Global nearest" stays flat and gets a red ×.

THEN 2:52

The three chips pop in one at a time.

END 2:57

The closing line fades in. Press Esc to switch to Explore mode for Q&A.

HOW IT RUNS

Proposed build

FRONT END

A single-page app in `ui_demo/`: plain HTML + JS + SVG, with the chart lib saved locally. No CDN, so it works offline.

BACK END

The existing FastAPI app serves it at `/ui`. One command: `uvicorn src.api.main:app` → open localhost:8000/ui. It can also point at the LinuxONE tunnel.

MODES

Story: arrow keys step through the 7 screens for the video. **Explore**: free navigation and a case picker for judges' Q&A.
